Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Preliminary Amendment Received

1. Acknowledgement is made of the receipt of the Preliminary Amendments filed on July 7, 2003.

Claim Objections

2. Claims 28-29 are objected to because of the following informalities: Claims 28-29 originally filed with this continuation application are objected because they depend on the canceled claims. Note that these two claims were canceled in the parent case 09/910,617. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 1, 3-7, 18-19 are rejected under 35 U.S.C. § 102(e) as being anticipated by Shimizu et al. (U.S. 6,386,668)

Shimizu (fig.3) discloses the instant claimed line head of a printer having the head length equal to the width of recording paper for permitting fast printing.

A printer, comprising:

at least one ink-ejecting mechanism (24), the at least one ink-ejecting mechanism having a printer head;

at least one head chip (231, 232, 233) formed on the printer head, the at least one head chip being formed in an array pattern on the printer head (23); and

a plurality of nozzles (23a) formed within a plurality of nozzle arrays positioned on a nozzle plate, wherein nozzles associated with one nozzle array and nozzles associated with an adjacent nozzle array overlap along at least one direction to form an overlapped area on a print object such that when the at least one ink ejecting mechanism drives across the print object the nozzles of the one nozzle array and the nozzles of the adjacent nozzle array respectively eject inks which are mixed in the overlapped area to reduce dot density differences on the print object, wherein the nozzles are placed on the nozzle plate almost as wide as the print object (col.1, lines 16-18) to form the nozzle array in a direction perpendicular to the feeding direction of the print object.

Re claims 3, 4 limitations, it is apparent that nozzles in the overlapped areas (A-L, a-l; fig.28B) will be shifted such that a boundary is set when the print object is smaller than the overlapped areas.
